

Pests globally consume food estimated to feed an additional one billion people (Birch et al 2011)

Main areas of concern:

- Crop protection
- Sustainable growth
- Pesticides use

IPM and definitions (agriculture)

- A consensus on IPM definition is yet to be reached
 - Survey in 1996 recorded 64 definitions of integrated control, pest management or integrated pest management.
(Bajwa and Kogan 1996)

IPM is a decision support system for the selection and use of pest control tactics, singly or harmoniously coordinated into a management strategy, based on cost/benefit analyses that take into account the interests of and impacts on producers, society, and the environment.

(Kogan 1998)

FHF strategi - Bidra til kunnskap for utvikling av Integrated Pest Management mot lakselus
